SUMMARY

Full-stack software engineer with technical lead and internship experience delivering cloud-native applications on AWS using TypeScript, Python, and Next.js. Cut cloud spend by \$2K/month through CI/CD redesign and built an AI-powered lead-enrichment system that saved \$40K in operational costs, owning the full product lifecycle from architecture to production launch.

EDUCATION

Arizona State University — B.S. Computer Science, Tempe, AZ

Expected May 2026

GPA: 3.5 · Coursework: Data Structures & Algorithms, Computational Techniques, Natural Language Processing & AI

EXPERIENCE

APMAC Consulting — Technical Lead Intern

Sep 2025 – May 2026

- Shipped core platform features across the full stack using Next.js, Python, and AWS — owning architecture, UI design, testing, and production launch — accelerating release cycles and improving user experience.
- Cut cloud spend by ~\$2K/month by redesigning CI/CD, hosting, and deployment infrastructure on AWS, improving release reliability and scalability.
- Built and launched AutoML workflows, chatbot integrations, and user-management systems, reducing model-delivery timelines for internal teams and end users.

SocialScape Capital / Kensridge Partners — Founder & Software Engineer

Jan 2023 – Present

- Engineered an AI-powered lead-enrichment system with LangChain, the SERP API, and a fine-tuned Llama model that automated prospect qualification — saving ~\$40K in operational costs — then evolved it into an agentic CRM and database.
- Rebuilt the company web platform with Next.js and TypeScript, integrating Stripe payments and a custom Prisma-backed CRM, enabling faster client onboarding and real-time data provisioning.
- Deliver AI-driven analytics (PyTorch, Rust) and maintain a secure PostgreSQL database for clients and backers including SparkLabs and Singularity Capital, strengthening their decision-making and partnership confidence.

Practicine — Software Intern

Jun 2021 – Aug 2021

- Developed the core iOS interface in Swift (UIKit) for a medical-learning platform and defined its UI/UX strategy, earning positive beta-tester feedback.

PROJECTS

EfficientAI (Rust, TypeScript, AWS, Terraform)

2026 – Present

- Lead developer (109 of 263 commits on a 4-person team) of a B2B usage-analytics platform for AI coding assistants that attributes usage to tickets and reports per-user and per-team cost plus efficiency signals such as cache-hit ratio and cost-per-ticket.
- Built a Rust workspace spanning a localhost OTLP device agent, a PostgreSQL-backed ingest API, and a Stripe-integrated billing control plane — architected around a hard privacy boundary where prompt and code content never leaves the developer's machine.
- Shipped a React + TypeScript dashboard, ticket-connector syncs (Linear, Jira, GitHub, Asana, Notion), and an AWS ECS deployment defined in Terraform with automated cross-platform release packaging.

AI Inference Accelerator (Neural 1 / Neural MAX) — velocity-silicon.com

Nov 2025 – Present

- Architected a custom AI-inference accelerator from scratch, modeling ~5,500–6,600 tokens/s on a 30B-parameter MoE LLM within a 600W power envelope.
- Built a Python RTL generator that compiles a chip specification into configuration-dependent Verilog modules, and wrote C++ drivers exposing a USB-C / PCIe Gen 5 endpoint.
- Established a numerics regression suite (GPT-2 baseline) validating quantized kernels against floating-point references across 113 commits.

Market Terminal (Next.js 15, FastAPI, DuckDB)

2026 – Present

- Building a local-first market-intelligence terminal: a Next.js 15 dashboard (react-grid-layout, TanStack Query, Zustand) over a FastAPI backend with WebSocket fan-out, APScheduler jobs, and a rate-limited async ingestion layer into DuckDB and SQLite.
- Wired REST, WebSockets, scheduling, and storage end to end with generated OpenAPI types; integrating FinBERT sentiment scoring.

StoryboardAI (Next.js, AWS CDK, Amazon Bedrock)

2026 – Present

- Architecting an AI-native collaborative storytelling environment on an AWS-native stack — AppSync GraphQL, Lambda, DynamoDB, Aurora Serverless (pgvector), Cognito, and Claude via Amazon Bedrock — with all infrastructure defined in AWS CDK (TypeScript).
- Designed the core continuity engine: a persistent "story bible" as authoritative state, with per-action context assembly and drift-checking of AI output against it across text, image, and audio.

ProductivityAI — productivityai.pro

2025 – 2026

- Built a full-stack AI productivity and CRM platform (Next.js 15, Prisma, PostgreSQL) deployed continuously on Vercel over 93 commits; cut query times ~40% and integrated an AI assistant, automated email/lead handling, and Slack-style collaboration.

SKILLS

Languages: Python, TypeScript, JavaScript, C++, Rust, Java, SQL, Swift, C

Web & Backend: Next.js, React, React Native, Node.js, Express, FastAPI, Prisma ORM, REST APIs, WebSockets, Tailwind CSS

Cloud & DevOps: AWS (Lambda, S3, DynamoDB, EC2, API Gateway, Cognito, CDK), Terraform, Vercel, Docker, CI/CD, PostgreSQL, Redis, DuckDB, OAuth, RBAC

AI / ML: PyTorch, TensorFlow, LangChain, CUDA, LLM application development, quantization & inference
